CARBON TRACKER

In keeping with our mission, we here at Rethink are committed to net zero operations at a minimum. Our goal is to become carbon neutral across all our activities, and hoping to continue to be models in the waste management industry.

We're currently tracking carbon in line with GHG Standards focusing on tier 1

In keeping with our mission, we here at Rethink are committed to net zero operations at a minimum. Our goal is to become carbon neutral across all our activities, and hoping to continue to be models in the waste management industry.

We're currently tracking carbon in line with GHG Standards, focusing on tier 1 and 2 emissions that are produced from our direct activities. As we continue to grow, we're committed to tracking and offsetting all emissions, both direct and indirect.

CARBON TRACKER

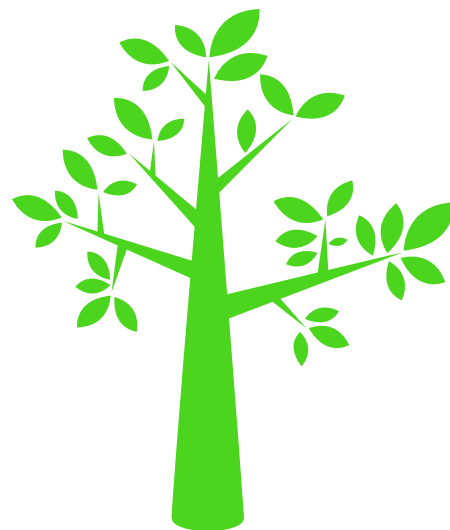

While our current fleet of trucks makes what we do possible, the emissions from the diesel engines make up the bulk of our carbon triggered. By equipping each of our trucks with geolocating apps, we're able to monitor the exact routes, mileage, and fuel efficiency. While this not only allows us to constantly review and update routes for efficiency, it also gives us valuable data that makes calculating our precise emissions possible. Our current fleet is 25% electric, with plans to move to 100% electric vehicles by 2024.

Currently we're offsetting **101%** of all carbon produced from scope 1 and 2 activities, per GHG Guidelines. This means that we're currently Carbon Negative, a key objective as a part of our mission. Nulla ante sapien, congue sed luctus non, aliquam eget velit.
